About this catalog

We are pleased that you have chosen to use Jaeger Medical products.

The Jaeger product portfolio ranges from small mobile devices to large pulmonary function laboratory devices. As a result, there is a variety of consumables and accessories associated with each specific product. This catalog is designed to ensure that you find the correct consumables and accessories for the specific piece of Jaeger equipment you are using both quickly and effectively.

For ease of use the catalog has been divided into three hierarchical levels:

- 1. Level 1:** functional areas such as Pulmonary Function Testing, Cardiopulmonary Exercise Testing, etc.
- 2. Level 2:** subdivides the functional areas into specific device names. Look for the name of your device. If the device name is not clear, the device overview on the following pages will give you assistance.
- 3. Level 3:** is a further subdivision of the devices into their measuring applications or product groups, e.g., spirometry.

The index at the end of the catalog can also be used to search for all consumables and accessories listed in the catalog.

An order form can be found in the back of the catalog. Should you use your own order forms, we ask that you reference the Jaeger product part number and item description to ensure orders are processed in a timely manner.

Jaeger consumables and accessories are designed, selected and validated specifically for Jaeger devices. Please use only the original consumables and accessories from Jaeger to ensure accuracy of results and patient safety.

We are happy to hear from you.
