

# Complex Pulmonary Function Patterns: A Case Based Review of Current Concepts and Controversies

Join Prof. Dr. Alexander Niven for an insightful discussion on the evolving landscape of pulmonary function assessment. For more than 10 years, there has been growing interest in the mechanisms and patient-centered outcomes related to various complex pulmonary function patterns, as outlined in the ATS/ERS 2022 Interpretation Guidelines. This includes non-specific patterns, complex restriction, and mixed disorders, alongside significant research into Preserved Ratio Impaired Spirometry (PRISm).

This webinar will provide an update on our current understanding of these conditions, focusing on definitions, postulated physiological mechanisms, and associated disease states, complemented by illustrative case studies.

Don't miss this opportunity to enhance your knowledge in the field of pulmonary function testing!
